Portfolio

Summary

Goal-oriented Software Engineering graduate specializing in web, network, and API penetration testing. Active practitioner preparing for the HackTheBox Certified Penetration Testing Specialist (CPTS) with extensive hands-on experience identifying OWASP Top 10 web exploitation risks and business logic flaws. Experienced in automating security assessments and producing technical Proof-of-Concept (PoC) reports to remediate infrastructure vulnerabilities.

Work Experience

XO Cyber US Remote

Cybersecurity Intern January 2026 – July 2026

- Monitored enterprise security events using Microsoft Defender and Coro for real-time threat detection and network security management.
- Conducted deep threat investigations, manual risk validation, and log analysis to mitigate network intrusions and behavioral anomalies.
- Analyzed incoming email payloads, phishing vectors, and structural indicators using detailed Email Header Analysis.
- Delivered critical tasks on strict timelines, adopting a defensive analytical approach to remediate unexpected infrastructure vulnerabilities.

Projects

Artifactory Security Engine (Practioner First AI Pentesting Framework)

- Engineered an autonomous security testing engine built on Sovereign Blackboard Architecture (SBA) to run structured, scope-enforced, and token-efficient vulnerability assessments.
- Built a parameterized tradecraft playbook pipeline (/artifactory) that automates surface mapping, OWASP/PortSwigger vector testing, and dynamic fallback research for missing exploits.
- Create Testing Methodolgy from real world available Knowledge
- Best of all integrated with opencode so free Ai model can be used for pentesting

Source Code on Github

SIEM Integration & Security Monitoring Lab (Wazuh)

- Deployed and configured Wazuh SIEM within a local lab environment to aggregate, parse, and monitor security telemetry across endpoint systems.
- Analyzed system logs, established alerting rules, and simulated threat detection techniques to sharpen real-time intrusion monitoring capabilities.

CVEs Foresight (Threat Intelligence Dashboard)

- Engineered an AI-assisted dashboard utilizing LLM models to aggregate, parse, and analyze global CVE data feeds for proactive threat intelligence.
- Integrated an analytical interface providing security analysts with operational summaries of emerging software vulnerabilities to strengthen enterprise network defense.

Source Code on Github

Sslmate_CTsearcher (Information Gathering Automation)

- Developed a custom automation script leveraging the SSLMate API to streamline information gathering and reconnaissance.
- Automated sub-domain extraction and certificate transparency log parsing to map out external network surfaces.

Script On Github

Capture the Flag (CTFs) & Foundational Exercises

- Active practitioner on PicoCTF, focusing on advanced technical scenarios, web exploitation, and API logic flaws.
- Performed deep security code reviews on source files in Python to map out and remediate backend logic vulnerabilities.
- Aim to deepens the Offensive and Defensive
- Documented step-by-step Proof-of-Concepts (PoCs), vulnerability impact assessments, and remediation strategies for web and API flaws, mimicking real-world penetration testing reports.

CONTENT CREATION

Technical Mentor & Open-Education Contributor

- Produce architectural walkthroughs and practical demonstrations breaking down OWASP Top 10 web vulnerabilities, attack logic, and secure remediation techniques.
- Document complex security methodologies and backend business logic flaws to foster foundational knowledge and technical upskilling within the community.
- Incorporate audience feedback and constructive technical criticism to continuously refine instructional accuracy and resilience.
- Authored clear technical guides and visual walkthroughs breaking down complex OWASP vulnerabilities to demonstrate strong technical reporting and communication skills

Technical Skills

- **Web & API Pentesting**
- **Vulnerability Assessment**
- **Network Scanning**
- **OWASP Top 10**

Security Tools

- **BurpSuite**
- **Nmap**
- **Metasploit**
- **SQLmap**
- **ffuf**
